# Epratuzumab

National Cancer Institute

## Source

National Cancer Institute. *Epratuzumab*. NCI Thesaurus. Code C1887.

A recombinant, humanized monoclonal antibody directed against CD22, a cell surface glycoprotein present on mature B-cells and on many types of malignant B-cells. After binding to CD22, epratuzumab's predominant antitumor activity appears to be mediated through antibody-dependent cellular cytotoxicity (ADCC).
