## Comments to Authors/Author

The article investigates Continuum Models and Singularities for Heat Distributions From Light. The paper needs the following minor revisions before the editor makes a final decision. My comments are as follows:

1. Introduction should be better.
2. There is too much information in the abstract that should belong to the introduction. Please keep the abstract more concise.
3. More bibliography is needed for the reader to better understand.
4. Only key results should be added to the abstract.
5. Improve the legend and quality of figures.
6. Can you provide a comparison between your proposed methodology and previous ones?
- 7: Authors should also provide a detailed implementation procedure.
8. The manuscript should be prepared according to the style of the journal.
