Interleukin-2 Anti-Idiotypic Vaccine

National Cancer Institute

Source

National Cancer Institute. *Interleukin-2 Anti-Idiotypic Vaccine*. NCI Thesaurus. Code C29112.

A vaccine based on anti-idiotypic (Id) monoclonal antibodies combined with interleukin-2 (IL-2). Anti-Id vaccines have been shown to be effective in treatment of B-cell lymphoma in animal models and in clinical trials, resulting in tumor regression; the addition of interleukin-2 (IL-2) may augment the therapeutic effect of anti-Id vaccines. (NCI04)
