Dear authors, I appreciate your comments and suggestions on the case presented. I will take note of your comments and take them into account for future revisions. Regarding the patient's age, she indeed appears to be an adult based on her weight and chest x-ray, but it is important to include this information for a better understanding of the case. I will also consider adding the left chamber diameters and VSD measurements for further evaluation. Regarding the calculation of Qp/Qs after catheterization and the indication for surgery, I will review these aspects again and analyze whether the patient really needs surgical intervention (Qp/Qs 1.2). I appreciate your perspective and would be happy to discuss this topic further. Thank you for your cooperation!
