

Review of: "Recycling of Waste Bamboo (*Bambusa vulgaris*) into Value-Added Platform Chemicals: Bioethanol and Bioethylene"

Renato Augusto Pereira Damásio

Potential competing interests: No potential competing interests to declare.

Title: Suggestion to change for: Bamboo waste based chemical conversion platform into Bioethanol and Bioethylene.

Abstract: Needs to include numerical results, amount of words, 150-200 max.

Methodology, results, and discussions need to be completely revised, sorry. I didn't see results. From my point of view, a big part of the methodology remains as a results section; please consider rewriting the material focused on your results.

Conclusion: Unfortunately, it's too big, and for me, it needs to be a short text claiming the main deliverables from your results.

The whole material, for me, seems like a short report; I think you need to dedicate more to publishing.

However, I would like to congratulate you for the efforts to use bamboo biomass and look forward to biosolutions from this material! If you want to talk with me, I can make myself available for further comments!

My very best regards,

Renato D.
