Potential competing interests: No potential competing interests to declare.

1. Phytochemical analysis could have been included in this study. Or a discussion on already available literature would be sufficient.
2. Statistical analysis carried out is satisfactory.
3. An explanation on the formula/methodology used for calculating LD50 value could be added to make this aspect clear.
4. How was the dosages 25 mg/kg, 75 mg/kg fixed?
5. Discussion on the effect of extracts on biochemical and hematological parameters could be given inorder to make the study more valuable.
6. The references are comprehensive and clear
7. Overall, this study is good
