Potential competing interests: No potential competing interests to declare.

The article is well-written and acceptable in terms of grammar and structure. It provides an overview of the parameters affecting the lifespan of electric vehicles, particularly batteries. However, despite considering important points, it is very simplistic and overlooks details, challenges, and even solutions. Overall, this article does not present any new information and lacks any statistical research or evidence. Therefore, if the authors intend to publish an article, they should delve into more articles, examine the challenges, and provide suggestions using simulation and statistics.
