Potential competing interests: No potential competing interests to declare.

I want to indicate some points that I didn't see in the text.

1- Where does the data gathered (which broker gave its data to you)?

2-Which time frame did you test your algorithm for?H1, H4, or daily or what?

3- Did you test your algorithm just for one pairs? As you know, each of the currencies work on specific algorithm and they would change it from time to time that make the prediction harder.

4- If I where you, I would add some criteria to add opening BUY/SELL positions to check my prediction in other way, however it needs a strategy for opening position.

5- I would like to see your result in a chart with better resolution that shows the comparison of your prediction and the real data.

6- Please provide more information to en-light the difference of hybrid models and ensemble models and why did you used them both.
