"Investigation and Synthesis of Benzothiazole-Derived Schiff Base Ligand Against Mycobacterium tuberculosis"

The article needs major revision. The introduction part should be rewritten as there are so many repetitions of lines and grammatical mistakes.

In the experimental section, it should be mentioned how many moles or mmol of the reactants were used for the reactions. The purification of the product is not clear, especially the washing liquids.

In the experimental section, the authors should mention the values of different spectroscopic methods. The melting point should be mentioned.

The authors should clarify the method of molecular docking in detail.

In my view, the manuscript should not be recommended for publication in its present form.
