

Review of: "Exploring the Significance and Medicinal Potential of *Rubus fraxinifolius*: A Review of Ragimot Wildberry"

Luxian Zhou

Potential competing interests: No potential competing interests to declare.

Overall, the paper reads well. A couple of comments as follows:

1. In the "Nutritional composition" section, it would be very useful if the authors could summarize what has been reported/studied in more detail in table format, including listing the different compositions (and structures) and relevant studies (as cited), as well as its focused function/benefits.
2. In the "Functional properties" section, several functions have already been mentioned in the previous sections. I think in this part, the authors should dig into more details in terms of mode of action, possible biological pathways, which eventually contribute to the final functions.
3. Are there any limitations to the future application of *Rubus fraxinifolius* as a medicine? What is the progress now? This information should be included to complete a comprehensive review.
4. The authors should increase a bit on the scientific depth part.
