This is an interesting and timely topic, keeping in mind the fast transformation of technologies and the constant need to assess their adoption. The rigorous work behind the paper is obvious. I have some comments that I hope may help the author to make the manuscript better. Was the UTAUT model adapted and validated for the target auditory? Please give evidence that your results are valid and reliable. I couldn't find the hypotheses in "Literature review and hypotheses development". There is too much discussion in the results and the discussion section is quite scarce. Please differentiate results from discussion clearly. The conclusions are too few. Many readers start with the conclusions to find major highlights in a paper, so writing conclusions should be addressed properly. Wish you success with publication!
