The manuscript deals with an important thing that is sometimes ignored, especially in most of the cities in the sub-continent. It is a good topic that describes the existing situation and the understanding of the situation by collecting primary and secondary data and analyzing it to find out the gist of the situation. Despite the significance of the subject matter, I find the work lacking in proper structure. Below are my evaluations of the manuscript and suggestions for its enhancement:

1. The quantity of literature evaluated for the study is insufficient and requires a greater emphasis on those studies that are relevant to the topic matter.
2. The methodology section should offer a comprehensive explanation of the data obtaining process, including details on sampling, data processing methods, and other considerations related to data preparation. This will enhance the overall organization and structure of the section.
3. What new things does this article add to the field, and how does this paper have an edge over other papers similar to this field?
4. Language correction is required throughout the work to eliminate grammatical errors and to rewrite the abstract with a focus on the objectives, methods, and key findings only.
