

Review of: "Prevalence of visual impairment and associated factors among welders in West Shewa Zone Oromia Region, Ethiopia"

Ammar Hasan Bek

Potential competing interests: No potential competing interests to declare.

The study didn't consider the other underlying reasons for vision loss, such as diabetes, hypertension, conjunctivitis. It is important to know if the vision loss was caused only by the reasons explored by the study or impacted/exacerbated by the other medical factors.

Moreover, the study didn't explore if there is any significant difference in the study results with the change of other variables such as age, race, education level, etc.
