

# Review of: "Reforesting\_now"

Romullo Louzada

Potential competing interests: No potential competing interests to declare.

Considering the article as a scientific publication, my comments are related to the structure: 1) the introduction presents relevant themes, however fragmented (paragraphs without connection), added to the fact that there are no bibliographical references; 2) the objective of the work is not clear; 3) the methods section needs to be explored in more detail; 4) I understood that the results come from a single tree, correct? If yes, explore future potential and challenges, and whenever possible, discuss these results with similar experiences.
