Potential competing interests: No potential competing interests to declare.

The article exhibits scholarly rigor, offering valuable insights into how background color and attractiveness impact mood. Nevertheless, it's important to recognize potential limitations in generalizability and scope. The study's novelty, methodology, and discoveries render it well-suited for publication in a peer-reviewed journal such as QEIOS, particularly within the realms of affective science or human-computer interaction. In summary, although the study provides significant insights into the impact of background color and attractiveness on mood, enhancing its impact and broadening its appeal to a wider academic audience could be achieved by addressing potential limitations and offering clearer explanations of certain analyses.
