I am glad to review this paper. This paper studies the relationship between regional productivity and economic growth. Specifically, the paper uses modeling methods to test the regional spillover effects between three types of cities in two selected sectors through scenario analysis. I have the following views on this article.

1. The contribution of this article should be clearly expressed.
2. The author should briefly introduce the SAM-K/LINE model, not just a broad description that "this is a Danish regional macroeconomic model".
3. The conclusions of the article are many and scattered, and the author should clearly express the core conclusions.
