Potential competing interests: No potential competing interests to declare.

It is a pleasure to address you regarding the report that I have recently had the opportunity to review. I want to highlight that the topic addressed in said report is undeniably interesting and relevant in the current context. However, I would like to point out that, although the document presents certain elements that may be useful, it cannot be considered a complete investigation in the conventional sense, since it lacks relevant information after the investigation.

Reading the report is simple and clear, which makes it easy to understand the key points presented. However, it is important to note that this report does not meet the usual research standards in terms of depth of exploration and exhaustive data collection. Rather, it appears to be a summary or report of ideas and concepts drawn from various sources and references.

One of the aspects that deserves special attention is that the report does not explicitly state the references used or provide a detailed research methodology. Instead, it seems focused on extracting information from existing sources, making it more like a data collection report than an actual investigation.

In summary, the topic addressed in the report is, without a doubt, interesting and relevant. The clarity in the presentation of ideas and the simplicity of reading are points in its favor. However, it is important to keep in mind that the report does not meet the usual criteria of an investigation, since it lacks the depth and methodology necessary to be considered as such. Rather, it resembles an information gathering report.
