Dear Editor In-Chief

Qeios Journal

Hi,

I evaluated the manuscript titled '[Evaluation of Chemical Content and Phytochemical Composition of Yemeni Almond Cultivars](#)'. The article contains interesting information regarding the macro and micronutrients," and I have some points for the authors.

- Sample collection and its rationale are described.
- How many samples were obtained from each almond cultivar? Please refer in the text.
- Please mention the references for the sampling method.
- Please provide the references for the determination of the phytochemical content of almond seeds, the determination of total phenols, and the determination of total flavonoids.
- Please indicate the number of samples in one column for almond cultivars in all Tables.
- The authors should add mean \pm SD and median for Tables 3, 4, and 5 and provide significant differences by P-value. The authors indicate significant differences ($P < 0.05$) with different letters within the column and describe this at the end of the Tables.

I suggest the manuscript be accepted after responding to the comments. Thank you

Best regards,

Z. Hadian
