

# Review of: "Negativity, zeros and extreme values of several polynomials"

Dr Rajeshwari S

**Potential competing interests:** No potential competing interests to declare.

In this paper, the authors presented negativity, zeros and extreme value of the single variable polynomials by using Descarte's rule of signs and other techniques and proved two Propositions.

The first demonstration of proposition 1 is simple even it is lengthy and the second proof of proposition 1 is bring, it make use of sophisticated information.

I will strongly recommend this paper can publish in your esteemed journal.
