The authors have worked on an interesting topic of undiagnosed Type-2 Diabetes in healthcare. The paper has highlighted various merits; however, some of the key identifications can be included. The method used in the study can be evaluated with a larger dataset in comparison to the existing dataset. The information given in some headings is generalized, which can be narrowed down to the proposed work. Highlights can be given to the various performance metrics used in the form of figures and tables. Motivation and future scope can be included to forecast the need for the research work. Overall, the work is good. However, the improvements mentioned above, along with rectifying grammatical errors and formatting, will make the paper more suitable for publication.
