Hi there,

Good work! However, it would be better if comparative numbers are presented in a table, and the discussion section needs to be further expanded, especially regarding the ecological role of the species in the habitat!

By delving deeper into the ecological role of the species, the paper can provide valuable insights into its interactions with other organisms, its impact on nutrient cycling, and its contribution to ecosystem stability. This can help to highlight the species' importance in maintaining the balance and health of its habitat.
