The review on the research topic Acoustic Over- Exposure in the Institutional Land Use of Calabar Metropolitan Area, Cross River State, Nigeria.

The research is very interest as it depicts real live situation ongoing in the university environment. However there are the gaps in the author's presentation:

## Materials and Method.

1. The author did not state the advantage(s) of using BK Precision 732 Digital Sound Level Meter, equipped with a 4-digit Liquid Crystal Display (LCD), a condenser microphone, and an octave filter over other sound measuring instruments.
2. The author should briefly explain the procedures used in measuring the daytime (Leg) ambient noise level, the during of measurements and the interval between each measurements.
3. University of Calabar and University of Cross River State has two distinctive GPS coordinates, therefore i suggest that the author should mention the specific coordinates for each of the study area.
4. The sampling points are not mentioned with their corresponding GPS coordinates,

## Data Analysis

1. Since this research is quantitative in nature, the author should present the data that was used to arrive at the conclusion .
2. No descriptive statistical analysis.
3. The author did not mention the statistical software used to arrive at the conclusion.

## References

1. The intext citation, 'author, 2023' is meaningless as a citation should have a name of the author and should be fully written in the reference.
