Potential competing interests: No potential competing interests to declare.

- 1- The abstract needs corrections including adding important research results.
- 2- It is necessary to clearly state the objectives of the research in the introduction.
- 3- The geological characteristics of the studied area should be added in that part.
- 4- No role has been found in research for lithological factors. These factors are very important in the research topic. It is necessary to include the role of these factors. Especially to be involved in the conclusion.
