**Potential competing interests:** No potential competing interests to declare.

The concept of the manuscript was remarkable, novel, and well-written. The introduction contains distinct arguments, the objectives are clearly stated, and the methodology is sound. However, additional improvements can be made to the manuscript's current version. First, a table summarizing the techniques used, the objectives of the papers, the system model considered, and their limitations should be included. Second, there are no statistics for the articles under consideration in the manuscript. Third, in the Results section, describe the interrelationships between the articles under consideration. Fourth, statistical data and methodologies need to be represented. Fifth, it is necessary to include a discussion of the obstacles and difficulties associated with EV's implementation of blockchain technology.
