Review of: "M-cell targeting acid-resistant oral vaccine delivery for immunization against Hepatitis B infection using cationic solid lipid nanoparticles"

Saeed Reza Hormozi Jangi

The presented study is a well-prepared manuscript, however, some key comments should be considered for improving its quality;

1. XRD of the as-prepared nanoparticles should be recorded and their crystalinty should be checked.
2. The TEM image should be analysized by Image J software for more precise size report.
3. The biocompatiiblity of the nanoparticles should be checked.
