**Potential competing interests:** No potential competing interests to declare.

This paper proposes a sentiment analysis method, The proposed approach is quite novel. However, there are some issues to be fixed in this article:

- English should be extensively revised and corrected. It is highly inadequate for publishing. And it is strongly suggested that the whole work should be carefully revised.
- This paper must address one of the methods related to the text. Unfortunately, this paper ignores the embedding techniques (Word2Vec, BERT, GloVe, and FastText). I suggest adding a new section related to one of these techniques.
- This paper must address the list of features related to text for more information:  
(<https://ejournal.um.edu.my/index.php/MJCS/article/view/29394/14289>)
- There is no comparison section, and I recommend adding the baseline section and comparison with the state-of-the-art methods, for more details ( <https://doi.org/10.32604/csse.2023.035753>)
- The conclusion can be compact highlighting the salient findings only.
- The conclusion is quite long.
