Potential competing interests: No potential competing interests to declare.

The paper discusses the various aspects of challenges involved in machining of Ti-6Al-4V. However, the literature review needs to be expanded with more recent works. For instance, the following recent papers need to be discussed on machinability aspects of Ti-6Al-4V:

1. Doreswamy et al. (2022a). DOI: 10.1051/mfreview/2022016
2. Doreswamy et al. (2022b). DOI: 10.5829/ije.2022.35.11b.20
3. Doreswamy et al. (2023a). DOI: 10.25103/jestr.161.09
4. Doreswamy et al. (2023b). DOI: 10.14456/apst.2023.51

Furthermore, the need and motivation of the work need to be clearly demonstrated. Finally, the objectives of your work need to be emphasized in the Introduction section, and findings of the study should be highlighted clearly.
