Potential competing interests: No potential competing interests to declare.

The main goal of this paper is to promote the International Panel on Land Subsidence (IPLS) with the aim of bringing together the research community working on land subsidence and sea level rise. Probably out of the scope of the paper, but I would suggest the authors add a section about tools and strategies to estimate and manage land subsidence in coastal areas. Moreover, in the Introduction, I would change the following sentence to "Although land subsidence is the dominant force driving relative SLR worldwide," since there are also other important sources inducing SLR.
