# Hypomyelination with atrophy of basal ganglia and cerebellum

INSERM

## Source

*INSERM. (1999). Orphanet: an online rare disease and orphan drug data base.*

*Hypomyelination with atrophy of basal ganglia and cerebellum. ORPHA:139441*

Hypomyelination with atrophy of basal ganglia and cerebellum (H-ABC) is characterized by slowly progressive spasticity, extrapyramidal movement disorders (dystonia, choreoathetosis and rigidity), cerebellar ataxia, moderate to severe cognitive deficit, and anarthria/dysarthria.
