Potential competing interests: No potential competing interests to declare.

After reading the paper "Economic System Rationality Entropy setting for Kenya by Fiscal Policy, Job Re-assignment and Job Creation: Human Capital-based Resilience Indexing against China", there are some suggestions for the author's reference.

Overall, this paper uses economic system rationality entropy to measure resilience by examining 13country habitats for more than half -- 4.063 billion of the world's population. The selection of this article has high research value. However, there are some areas that can be further improved, specifically as follows:

1. The introduction needs to focus more on the research topic. The contribution and innovation of research are slightly insufficient.
2. The basis for selecting China as the benchmark needs to be further explained.
3. It is necessary to further improve the academic and logical nature of the full text.
