**Potential competing interests:** No potential competing interests to declare.

As the author notes, the emergency switch to online learning that occurred during early 2020 was unprecedented. Educators throughout the world scrambled to deliver content to their students in a new format, often without the necessary resources. This paper provides a good overview of the many challenges faced by educators and students in various parts of the world.

Although the topic is very interesting and important, the author may want to consider a few modifications. In the beginning, they note that the paper will analyze the gap between planned online learning and emergency remote learning. The author did point out several difficulties associated with emergency remote learning, but didn't thoroughly analyze the gap. A deeper analysis would strengthen the paper. Also, the paper seems outdated. Throughout, the author refers to the switch to remote learning as an in-progress event. In one section, the author writes that South Korea will be moving back to in-person learning 13 May 2020. In another section, the author provides online learning data from 2021. This is a tough issue to deal with. Because we are in the midst of the pandemic, it is difficult to be timely. Perhaps the author could approach the topic by focusing more exclusively on a specific period.
