This preprint has been withdrawn.

This preprint has been withdrawn following concerns raised by the National Longitudinal Study of Adolescent to Adult Health (Add Health) regarding the provenance and authorised use of restricted-use Add Health data underlying the analyses.

Qeios asked both authors to provide information sufficient to establish the provenance and authorised access route for the Add Health data used in the preprint. Sufficient information to resolve these matters was not provided.

The preprint has therefore been withdrawn because the provenance and authorisation of the restricted-use data underlying the analyses could not be sufficiently verified.

The withdrawal records an unresolved issue concerning the provenance and authorised use of the data underlying the analyses. It does not, in itself, establish research misconduct, unlawful data access, a breach of applicable data-use terms, or any conclusion concerning the methodological or substantive merits of the manuscript.
