The paper subject is interesting and valuable in the mathematics field, but the manuscript needs major review.

1. The whole manuscript needs rewriting in a scientific approach.
2. The abstract is not clear and needs to be more scientific and present the ideas of the manuscript.
3. The Introduction needs more recent references from the last five years, and the aim and the objectives should be at the end of the introduction.
4. The author/s should focus on the aim of the subject and apply a scientific approach in the presentation of the problem and the process of solving it.
5. The results should be discussed clearly and the causes of these results found.
