Potential competing interests: No potential competing interests to declare.

1. Firstly, the abstract needs to be more informative. It needs more methods and findings related inputs, and the contributions.
2. Secondly, maybe you want to explain more about why you choose the period from 2015 to 2020.
3. Thirdly, the sampling and the justification of 324 observations need the detail of the participants (e.g., why and how?).
4. Fourth, the method section needs further justification. For example, why this paper used the "individual econometric model"?
5. Fifth, maybe you miss part of the discussion. And conclusion section should include suggestions for future studies. Further, I can't find your contributions.
