The ideas presented are quite well introduced stimulating the reader. However, I could not find consistent arguments concerning knowledge being simpler to build a wiser environment. I could not understand how the examples may represent what is proposed. The examples of Excel, Exponential growth and Statistics, did not help me to understand what the author is aiming to. I recommend considering the concepts of Complexity Science as described in https://en.wikipedia.org/wiki/Complex_system. Additionally to follow the so called Headquarter of Complexity Science (www.santafe.edu) or the Vienna Hub (<https://vienna.imphub.net/>) to update how far ahead knowledge already is from the deterministic approach.
