Overall this is good article that try to propose Management Information System in the Ethiopia's coffee industry. This article can be improved by added more related reference since this is review article. In literature, might be the authors can add the sub title to make the review clearly. For instance at the first, author can add literature about existing condition coffee system in the Ethiopia, then can explore what the gap, after that author can explain that MIS as one solution to solve the existing gap.

Moreover, author need to explore more what kind,type of MIS that suitable in study area.. Author also can add the example existing MISS in other region or country (if availble)
