

# Review of: "Secure and Private Machine Learning: A Survey of Techniques and Applications"

S. Phani Praveen

**Potential competing interests:** No potential competing interests to declare.

The concept is quite vague. More clarity on the motivation and objective stated in the paper should be provided by authors.

Conceptual illustration of different approaches should be presented in initial sections of the paper.

The organization of the paper is quite confusing. A minimum of 10 – 15 recent publications should be included for the study.

Figures are of poor quality and resolution.

Each method projected in the paper could be assisted with apt illustrations for better interpretability.

The impartial of the work has been well stated in the abstract. However, the limitations and issues of the existing models can be summarized in the related work section.

Comparative analysis with existing models related to efficiency computation may be provided in a tabular format.
