# Abnormal number of coronary ostia

INSERM

## Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Abnormal number of coronary ostia. ORPHA:99089*

Abnormal number of coronary ostia is a rare congenital non-syndromic heart malformation characterized by more or less than one coronary ostium at the left and at the right aortic sinus of Valsalva. It may be asymptomatic or it leads to myocardial ischemia and technical difficulties during coronary angiography.
