Congratulations on the commendable effort and dedication evident in your exploration of the intriguing *Rubus fraxinifolius*, commonly known as Ragimot. Your work provides a comprehensive insight into the significance and medicinal potential of this species in the tropical forests of Sabah. However, to further enhance the relevance and clarity of the article, it is crucial to delve into some critical aspects that can enrich understanding and contribute to advancing knowledge in this fascinating field. In the following sections, I will provide a detailed analysis, highlighting specific points that warrant attention and deeper exploration.

Suggestions for Improvement:

- 1- Provide more explicit details on the pharmacological properties of *Rubus fraxinifolius*.
- 2- Discuss the potential drawbacks of the high sugar content in Ragimot.
- 3- Specify the source and methodology of antioxidant activity assays.
- 4- Offer a critical evaluation of existing literature on functional properties.
- 5- Address challenges and limitations in the conservation and domestication of Ragimot.
- 6- Emphasize the broader implications of Ragimot research in the conclusion.
- 7- Reorganize content for better flow and integrate figures and tables seamlessly.
- 8- Ensure a balance between scientific rigor and accessibility in language usage.
