Potential competing interests: No potential competing interests to declare.

In this paper, the authors established some fixed point results for contractive type mappings in cone metric spaces. Examples are provided to support results and concepts presented herein. As an application of the results, they deduced other established fixed point theorems in cone metric spaces.

- Improve grammatical and typographical mistakes in the whole paper
- All references should be discussed in the introduction section.
- How are these results better than the existing ones in the literature?
- Comparison with the existing literature is missing.
