# Gonadoblastoma

INSERM

## Source

*INSERM. (1999). Orphanet: an online rare disease and orphan drug data base.*

*Gonadoblastoma*. ORPHA:206484

Gonadoblastoma is a rare benign neoplasm of mixed sex cord and germ cells, arising mostly in the dysgenetic gonads of young women with a chromosome Y anomaly, presenting with abdominal enlargement, variable feminization or virilization or, in some cases, being asymptomatic. It is often associated with dysgerminoma.
