Review of: "Augmented Reality (AR) Technology on Student Engagement: An Experimental Research Study"

Ivana Cerato

Potential competing interests: No potential competing interests to declare.

The questionnaire was well structured, and the activity at school was well carried out. I would have elaborated more on the conclusion, starting with this very interesting statement: AR technology shows great promise in enhancing the classroom experience and making learning more interactive and enjoyable.

How could AR technology be incorporated into the learning pathway? How can teachers exploit the potential of this technology?

Some concrete and practical recommendations could be provided for educators and developers based on the results of the study, on how they can develop and use this technology. These recommendations should offer guidance for the effective integration of AR, addressing the benefits and challenges of AR in the classroom.
