Potential competing interests: No potential competing interests to declare.

The authors need to highlight the epochs of EEG time-series that were taken for data processing, and the coherence of the right and left cerebral hemispheres also needs to be underscored. The rationale for selecting 50 control and 50 age- and gender-matched children with autistic spectrum disorder (ASD) needs to be evinced. Moreover, the respective EEG lead pairs and their relevance, which were taken for evaluation, also need to be mentioned. Thank you.
