Hereditary isolated aplastic anemia

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base*. [Hereditary isolated aplastic anemia](#). ORPHA:397692

Hereditary isolated aplastic anemia is a rare, genetic, constitutional aplastic anemia disorder characterized by severe peripheral blood pancytopenia and bone marrow hypoplasia in multiple individuals of a family, in the absence of any somatic symptoms. Abnormal bleeding, as well as erythrocyte macrocytosis, is reported and patients usually become transfusion-dependent.
