Potential competing interests: No potential competing interests to declare.

This manuscript represents an advance in a field that requires more information for the incomplete indications already found. This study contains some novel, interesting data about the reproductive biology of Bluespotted Seabream (*Pagrus Caeruleostictus*, Val 1987) from the coast of Ghana.

General comment: When writing the discussion, the results of the research must be mentioned first, and then followed by the results of others.

The manuscript is well-written and should be published.
