N-Amyl-N-Methylnitrosoamine

National Cancer Institute

Source

National Cancer Institute. *N-Amyl-N-Methylnitrosoamine*. NCI Thesaurus. Code C29825.

A synthetic or natural carcinogenic compound found in a variety of smokes and industrial products, N-Amyl-N-Methylnitrosoamine is used in biomedical research to induce experimental hepatocarcinogenesis, probably through abnormal DNA methylation. (NCI04)
