Potential competing interests: No potential competing interests to declare.

Abstract (Line 1): Add the epithet of the scientific names of the species.

Background (Line 12): Your choice of the two species of animals is not sufficiently argued.

Methods

2.4. Animals used in experiments (line 4): Specify the duration of day and night

2.5. Brine shrimp cytotoxicity assay (line 3): For the doses why you used the same dose in tubes 4 and 5

Discussion: Lack of arguments concerning the elevation of these enzymes in relation to the state of the organs studied and also the comparison of the doses between the different enzymes.

Decision: In my opinion it is a contribution that can be published in Qeios after improvement.
