I reviewed the paper from the point of view of antimicrobial activity. The newly synthesized compounds themselves did not show antimicrobial activity in the range of the control. The authors themselves state this as a result. So I would suggest that the title be corrected. In the material and methods in the sentence Melting of soft agar tube was carried out and then after cooling it to 47 °C bacterial culture (10 µL) was added and tube was gently shaken, I think that 47 °C should be corrected to 40 °C. There are a couple of small technical errors: there is no space before the parenthesis in a couple of places and the like. I did not review the chemical part.
