Potential competing interests: No potential competing interests to declare.

The authors have studied a real-life problem that is very genuine and is of everyone's interest. Although the problem is defined effectively, the contribution of the authors in providing the optimal solution to the problem is not very clear. How the developed methodology is performing better than already existing methodologies is not shown. Abbreviations like RFID, UPI, ESP32, etc., are not defined on their first usage in the paper. In the conclusion section, the scope of the research work should be mentioned.
