Dear, It was a pleasure to read your article. My advice or suggestions are:

- I think it would be better to present the research process with a flow chart, as the final reader can see the research process more clearly,
- the use of statistical methods,- I think the sample size is too small,- I think the sample needs a more detailed description,
- for the sake of illustration, show the results in a table and then make a description of the table,
- all results you write down need to be measured or quoted from another author.

Good luck with your writing.
